## Arizona Mathematics Standards- 6 $^{\text {th }}$ Grade Standards Placemat

## Grade level content emphasis indicated by. Major Cluster; $\boldsymbol{\Delta}$ Supporting Cluster

Develop competency of division of whole numbers and fractions and extend the notion of number to the system of rational numbers. Students develop fluency with division of whole numbers and extend their
understanding to division of fractions. Students extend their previous understanding to division of fractions. Students extend their previous
understandings of number and the ordering of numbers to the system of rational numbers, which includes integers and negative fractions with denominators of $2,3,4,5,10$. They reason about the order and absolute value of rational numbers and about the location of points in all four quadrants of the coordinate plane.
Develop understanding of ratio and rate and use multiplicative reasoning to solve ratio and rate problems.
Students use multiplicative reasoning to solve ratio and rate problems. This extends their knowledge of multiplication, division, and fractions as the foundation for proportional reasoning that begins in 7 th grade. Students utilize multiple types of representations to demonstrate their understanding
Of the relationship between two quantities represented in a ratio or rate.
Develop understanding of expressions, equations and inequalities Students understand the use of variables in mathematical expressions. They write expressions and equations that correspond to given situations, evaluate expressions, and use expressions and formulas to solve problems. Students understand that expressions in different forms can be equivalen and they use the properties of operations to rewrite expressions in values of the variables that make the equation true. Students use properties of operations and the idea of maintaining the equality of both sides of an equation to solve simple one-step equations. Students construct and analyze tables, such as tables of quantities that are in equivalent ratios, and they use equations (such as $3 x=y$ ) to describe relationships between

## quantilies. <br> Ratio and Proportion (RP)

6.RP.A Understand ratio concepts and use ratio reasoning to solve roblems.
6.RP.A.1: Understand the concept of a ratio as comparing two quanitities multiplicatively or joining/composing the two quantities in a way
that preserves a multiplicative relationship. Use ratio language to hat preserves a multiplicative relationship. Use ratio anguage to describe a ratio relationship between two quantities. For ex
.RP.A.2: Understand the concept of a unit rate $a / b$ associated with a ratio $a: b$ with $b \neq 0$, and use rate language (e.g., for every, for each raction notation is not an expectation for unit rates in this grade level.)
6.RP.A. 3 Use ratio and rate reasoning to solve mathematical problems and problems in real-world context (e.g., by reasoning about data
collected from measurements, tables of equivalent ratios, tape diagrams, double number line diagrams, or equations).
a. Make tables of equivalent ratios relating quantities with whole-number measurements, find missing values in the tables, and plot the pais Sof values on the coord induding those involving unit pricing and constant speed.
c. Find a percent of a quantity as a rate per 100 (e.g., $30 \%$ of a quantity means $30 / 100$ times the quantity). Solve percent problems with th unknown in all positions of the equation.
d. Use ratio reasoning to convert measurement units; manipulate and transform units appropriately when multiplying or dividing quantities.

The Number System (NS)
6.NS.A Apply and extend previous understanding of multiplication and division to divide fractions by fractions.
6.NS.A.1: Interpret and compute quotients of fractions to solve mathematical problems and problems in real-world context involving division of fractions by fractions using visual fraction models and equations to represent the problem. For example, create a story context for $2 / 3$ $\div 3 / 4$ and use a visual fraction model to show the quotient; use the relationship between multiplication and division to explain that $2 / 3$
$\div 3 / 4=8 / 9$ because $3 / 4$ of $8 / 9$ is $2 / 3$. In general, $a / b \div c / d=a d / b c$
6.NS.B Compute fluently with multi-digit numbers and find common factors and multiples.
6.NS.B.2: Fluently divide multi-digit numbers using a standard algorithm.
6.NS.B.3: Fluently add, subtract, multiply, and divide multi-digit decimals using a standard algorithm for each operation.
6.NS.B.4: Use previous understanding of factors to find the greatest common factor and the least common multiple.
a. Find the greatest common factor of two whole numbers less than or equal to 100 .
b. Find the least common multiple of two whole numbers less than or equal to 12.
c. Use the distributive property to express a sum of two whole numbers 1 to 100 with a common factor as a multiple of a sum of two whole numbers with no common factor. For example, express $36+8$ as $4(9+2)$
6.NS.C Apply and extend previous understanding of numbers to the
system of rational numbers.
6.NS.C.5: Understand that positive and negative numbers are used together to describe quantities having opposite directions or values. Use context, explaining the meaning of 0 in each situation.
6.NS.C.6: Understand a rational number can be represented as a point on the number line. Extend number line diagrams and coordinate axes familiar from previous grades to represent points on the line and in the plane with negative number coordinates.
a. Recognize opposite signs of numbers as indicating locations on opposite sides of 0 on the number line; recognize that the opposite
of the opposite of a number is the number itself and that 0 is its own opposite.
b. Understand signs of numbers in ordered pairs as indicating locations in quadrants of the coordinate plane; recognize that when two ordered pairs differ only by signs, the locations of the points are related by reflections across one or both axes
c. Find and position integers and other rational numbers on a horizontal or vertical number line diagram; find and position pairs of integers
6.NS.C.7: Understand ordering and absolute value of rational numbers.
a. Interpret statements of inequality as statements about the relative
position of two numbers on a number line
b. Write, interpret, and explain statements of order for rational numbers in real-world context.
c. Understand the absolute value of a rational number as its distance from 0 on the number line; interpret absolute value as magnitud
d. Distinguish comparisons of absolute value from statements abo istinguish in comparisons of absolute value from statements about
order mathematical problems and problems in real-world context.
6.NS.C.8: Solve mathematical problems and problems in rea-world contex by graphing points in all four quadrants of the coordinate plane.
Include use of coordinates and absolute value to find distances Include use of coordinates and absolute value to find distances between poins with the same first coordinate or the same second coordinate

## Expressions and Equations (EE)

6.EE.A Apply and extend previous understanding of arithmetic to algebraic expressions
6.EE.A.1: Write and evaluate numerical expressions involving whole-number

> 6.EE.A.2: Write, reac
and evaluate algebraic expressions.
a. Write expressions that record operations with numbers and variables b. Identify parts of an expression using mathematical terms (sum, term, product, factor, quotient, and coefficient); view one or more parts
c. Evaluate expressions given specific expressions that arise from formulas used to solve mathematica problems and problems in real-world context. Perform arithmetic operations, including those involving whole-number exponents, in the conventional order when there are no parentheses to specify a particular order (Order of Operations).
6.EE.A. 3 Apply the properties of operations to generate equivalent expressions. For example, apply the distributive property to the
EEA A Identify when two exprosions are equival For oumbe expressions $y+y+y$ and 3y are equivalent because they name the same number regardless of which number y stands for.
6.EE.B Reason about and solve one-variable equations and nequalities.
6.EE.B.5: Understand solving an equation or inequality as a process of equation or inequality true Use substitution to determin whe agiven number in a specified set makes an equation or inequality true.
6.EE.B.6: Use variables to represent numbers and write expressions when solving mathematical problems and problems in real-world context; understand that a variable can represent an unknown number or any number in a specified set
6.EE B. . Solve mathematical problems and problems in real-world context by writing and solving equations of the form
$x+p=q, x-p=q, p x=q$, and $x / p=q$ for cases in which $p, q$ and 6.EE.B.8: Write an inequality of rational numbers.
epresent a constraint or condition to and problems in real-world context. Recognize that inequalitiems have infinitely many solutions; represent solutions of such inequalities on number lines
6.EE.C Represent and analyze quantitative relationships between 6EFC9: Use varibles to

Use variables to represent two quantities that change in elationship to one another to solve mathematical problems and quantity (the dependent variable) in terms of the other quantity (the independent variable). Analyze the relationship between the dependent and independent variables using graphs and tables, and relate these to the equation

## Geometry (G)

6.G.A Solve mathematical problems and problems in real-world
context involving area, surface area, and volume.
6.G.A.1: Find the area of right triangles, other triangles, specia
quadriaterals, and polygons by composing into rectangles or decomposing into triangles and other shapes; apply these techniques to solve mathematical problems and problems in realworld context.
6.G.A.2: Find the volume of a right rectangular prism with fractional edge edge lengths and shith unit cubes of the appropriate unit fraction edge engths, and show that the volume is the same as would be and use the formula $V=B$. lengths of the prism. Understand the base $(B=1 \times w)$ to find volumes of right rectangular prisms with fractional edge lengths in mathematical problems and problems in real-world context.
6.G.A.3: Draw polygons in the coordinate plane given coordinates for the vertices; use coordinates to find the length of a side joining points with the same first coordinate or the same second coordinate. Apply these techniques to solve mathematical problems and problems in a real-world context.
6.G.A.4: Represent three-dimensional figures using nets made up of rectangles and triangles, and use the nets to find the surface area nhese figures. Apply these techniques to sid tics and Probability (SP)
6.SP.A Develop understanding of statistical variability
6.SP.A.1: Recognize a statistical question as one that anticipates variability in the data related to the question and accounts for variability in the answers. For example, "How old am l?" is not a statistical question, but "How old are the students in my school?" is a statistical question because one anticipates variability in students
ages.
6.SP.A.2: Understa
SP.A.2: Understand that a set of data collected to answer a statistical described by it center sproad, gnd overall shacateristics can be
6SP.A.3: Recognize that a measure of center for a numerical data set summarizes all of its values with a single number, while a measure of variation uses a single number to describe the spread of the data set.

## 6.SP.B Summarize and describe distributions.

6.SP.B.4: Display and interpret numerical data by creating plots on a number line including histograms, dot plots, and box plots.
6.SP.B.5: Summarize numerical data sets in relation to their context by:
a. Reporting the number of observations
b. Describing the nature of the attribute under investigation including how it was measured and its units of measurement.
c. Giving quantitative measures of center (median and/or mean) and variability (interquartile range and/or mean absolute deviation), as well as describing any overall pattern and any striking deviations from the overall pa
d. Relating the choice of measures of center and variability to the shape of the data distribution and the context in which the data were gathered.
