Formative Assessment Grounded in Disciplinary Learning

Margaret Heritage

Rooted in the Disciplines

Formative assessment practices must be developed that are deeply rooted within the specific disciplines in which they are to be carried out.

(Andrade, Bennett, & Cizek, forthcoming)

• “Reform” Teaching, Disciplinary Knowledge and Formative Assessment
• Role of Leaders
Recap on Formative Assessment
Formative assessment is the term used to describe a type of assessment where the focus is on informing learning, rather than measuring it or summing it up.

Assessment that focuses on the learning as it is taking place.

Purpose is to move learning forward from its current status.

Ample evidence that formative assessment improves learning.
Keeping Learning on Track to Intended Goals
Evidence: Qualitative insights along the way

Respond to learning as it is unfolding
Formative Assessment Practices

1. Clear learning goals & success criteria
2. Eliciting and interpreting evidence of learning while it is developing
3. Immediate and near-immediate evidence–based responses
4. Feedback to students
5. Student involvement – peer feedback and self-assessment
Guiding Questions

- Where am I going?
- Where am I now?
- Where to next?

Close the gap

Sadler, 1989
Learning status at start of lesson

Formative Assessment

GAP

Lesson Learning Goal
Formative Assessment is...

• **Intentionally** obtaining evidence in the course of continuous teaching and learning through observation, discussion, questioning, and review and analysis of tasks/work

• gauging how student learning is progressing **while** students are in the process of learning

• using evidence to inform immediate or near-immediate teaching and learning

• providing ongoing descriptive feedback to learners

• involving students in the assessment process through peer and self-assessment

Formative Assessment is not...

• giving a test at the end of an instructional cycle or on a predetermined basis (e.g., quarterly, annually)

• evaluating student achievement at the end of a sequence of learning

• using test data to make decisions about medium- and long-term goals

• assigning grades/reporting achievement

• telling students the results of a test
Formative assessment promotes the goals of lifelong learning, including higher levels of student achievement, greater equity of student outcomes, and improved learning to learn skills (OECD, 2008).
Disciplinary Learning
Disciplinary Learning

- Teaching learning strategies (e.g., critical thinking) out of context is unlikely to develop a generic skill applicable to many subjects.
- Mathematics proof - critical thinking: ensuring that each step follows from the previous one.
- Historical account – critical thinking: considering the author of the account, the potential biases and limitations that the author may be bringing to the account.

Wiliam, 2014
Teacher Knowledge: InTASC, 2011

• **Know how learning occurs** and how to use instructional strategies that promote student learning

• **Understand major concepts, assumptions, debates, processes of inquiry, and ways of knowing that are central to the discipline(s) s/he teaches**

• **Understand common misconceptions** in learning the discipline
Disciplinary Knowledge

• Typical pathways that students move along to achieve understanding

• Common difficulties or misconceptions students might encounter

Heritage & Wylie, (in Andrade et al.)
Teacher Knowledge

Knowledge

Concepts

Analytical practices

Skills
Disciplinary Learning: Math

- Conceptual understanding (solution pathways) and procedural fluency
- Justifying and explaining ideas
- Communicating reasoning about concepts
- Engaging in mathematical practices:
  - Constructing viable arguments and critiquing the reasoning of others
Disciplinary Learning: ELA

• Reading: Engaging with complex texts to build knowledge across the curriculum
• Writing: Using evidence to inform, argue and analyze
• Speaking and Listening: Working collaboratively, understanding multiple perspectives, and presenting ideas
Disciplinary Learning: Science

• Asking questions (for science) and defining problems (for engineering)
• Constructing explanations (for science) and developing designs (for engineering)
• Engaging in argument from evidence
• Obtaining, evaluating and communicating information
• Developing and using models
Disciplinary Learning: HSS

- Asking questions and developing a plan to answer those questions
- Applying disciplinary tools most appropriate to the questions (civics, economics, geography, history)
- Gathering and evaluating evidence from a variety of primary and secondary sources
- Communicating conclusions
- Taking informed action

How student learning develops: learning progressions

Teacher Expertise

Disciplinary Knowledge

Heritage & Wylie, forthcoming
1. Clear learning goals & success criteria

Establish lesson-sized LGs and SCs within a broader progression of learning
Integrate analytical practices into learning goals
Understand what meeting LGs and SCs entail and convey to students
Eliciting and interpreting evidence of learning while it is developing

Plan formative opportunities in the lesson
Understand common challenges and misconceptions
Pose questions to explore full range of thinking
Interpret evidence
Immediate and near-immediate evidence-based pedagogical responses to learning

Respond to students’ ideas
Know what is likely to be an effective pedagogical action
Make connections between and among ideas
Feedback to students

Understand student thinking
Help students recognize discrepancies between current status and learning goals and provide guidance to close the gap
Formative Assessment Practices

5. Student involvement – peer feedback and self-assessment

Focus students on disciplinary ideas
“Reform” Teaching, Disciplinary Knowledge and Formative Assessment
Familiar?

Teacher talks

Students listen...

...do worksheets

... and take tests
Traditional Lesson

Detailed, pre-planned lessons according to a fixed curriculum

Sequences of activities

“Remediation” of prescribed concepts
“Check for Understanding”

Got it. Didn’t Get It. Reteach!
“Reform” Teaching

Base instruction on the lesson as it unfolds in the classroom, paying particular attention to the ideas that students raise

Involves:

• Guided participation

• Scaffolded assistance

• Apprenticeship
“What ultimately counts is the extent to which instruction requires students to think, not just to report someone else’s thinking”

"Reform Teaching"

- Inquiry
- Reasoning
- Sense-making
- Collaboration
- Discourse
Nudging Learning Along

Nudge
nəj/

a light touch or gentle push
Responding to student ideas
Observing Phenomena
Make a Prediction

• Which fruit/vegetable will decompose first/last?

• Why?
Observing Phenomena
Make a Prediction

- What might students say?
- How to respond?
- How to guide/nudge learning forward?
FRUIT AND VEGETABLE DECOMPOSITION

74 DAYS 1 PICTURE/40 MINUTES

PLAYED BACK AT 30 FRAMES/SEC
Lesson (2 class periods)

Prior to lesson:

- Students examined a different set of growing patterns that differed in their rate of change

- Investigated them to determine the function of each pattern and make conjecture about the set
Lesson (2 class periods)

This lesson:
• Examining what happens when the pattern stays the same but the starting point shifts or changes

Subsequent lessons:
• Examine patterns that do not have a constant rate of change; extending learning to non-linear functions
As you watch the video, notice...

• How the task selection supports learning

• How the teacher “nudges” learning along in response to evidence

• How the teacher’s disciplinary knowledge undergirds the practice
reasoning which is what the Common Core is looking for.
So they'll be able to apply that later on.
with all of the other representations.
....the improvisational pedagogical skill of instantly knowing, from moment to moment, how to deal with students in interactive teaching-learning situations  (Van Manen, 1995)
Role of Leaders
Habits of Practice

• The teacher sees him/herself as a learner, continuously seeking opportunities to draw upon current education policy and research as sources of analysis and reflection to improve practice (InTASC, 2011, p. 18)

• The teacher takes initiative to grow and develop with colleagues through interactions that enhance practice and support student learning (InTASC, 2011, p. 19).

Providing the Conditions

• Professional learning culture

• Collaborative relationships

• Structures and time

• Feedback

• Sustained commitment
Summing Up

• Formative assessment can improve learning for all students
• Formative assessment is grounded in disciplinary knowledge
• “Reform” teaching involves responding to student ideas through formative assessment
• Leaders provide the conditions for continued professional learning
Thank You!
